Just type: netsh wlan connect name =(wifi name) netsh wlan connect name=Mynet Sata1 and you are connected to this WiFi network. 5: You can disconnect it by typing a netsh wlan connection to take advantage of WiFi to get a password there are many other methods. You can check them here. Also note that these tutorials are for teaching only. You can download WiFi hacking software by downloading the component. Tr5 Steps Wifi Hacking Cracking WPA2 Password: 1. Open the terminal (CTRL + ALT + T) and type airmon-ng (see tips and tricks on how to create a keyboard shortcut for kali linux) this command lists a wireless card connected to our system. 2. Next step we need to stop our wireless display mode running airmon-ng stop wlan0 3. Now we're ready to hijack the wireless traffic around us. With Airodump-ng wlan0, our wireless interface starts capturing data. From the image above, we can see many available supports with all the information. The green box contains the victim's support point, which is my own support point Information: Basic Service Set Identification (BSSID): support point PWR MAC address: The signal level reported by the card. Beacons: The number of notification packets sent by #Data AP packet: The number of data packets intercepted (if WEP, a unique NUMBER of IV), including data transmission packets. #/s: Number of data packets per second in the last 10 seconds. CH: Channel number (taken from the beacon package). MB: Maximum speed supported by AP. If MB = 11, it is 802.11b if MB = 22 it is 802.11b+ and the higher prices are 802.11g. ENC: You have an encryption algorithm. Cipher detected. TKIP is usually used with WPA, and CCMP is usually used with WPA2. Auth: Authentication protocol. ESSID: Displays the name of the wireless network. So-called SSID that can empty if the SSID hide is activated. 4. From step 3 above, we can find the access point encryption algorithm with WPA2 and notice the AP channel number. Now we will find out if the target with AP WPS is enabled or not. 5. The last step is to crack the WPA2 password with the reaver. reaver -i <your_interface>>-b <wi-fi victim= mac= address=>fail-wait=360 Since we already get the information from step 3 above, So my command looks like this: reaver -i wlan0 -b E0:05:C5:5A:26:94 fail-wait=360 took about 5 hours to crack 19 characters WPA2 password (vishnuvalentino.com) from my Kali virtualBox, but it depends on our hardware and wireless card. ANDLYS WAY TO HACK WIFI steps Hack Wifi password with CMD: 1: Open command prompt by going to launch and click run command or type windows + r, then type cmd and press Enter 2: In the command prompt window, type netsh wlan show network mode=ssid 3: command This will show all wifi networks available in your area 4: This is the last step. Just type: netsh wlan connect name =(wifi name) netsh wlan connect name=Mynet Sata1 and you are connected to this WiFi network. 5: To remove it, typing netsh wlan disconnect Wifi password hack with command prompt is very easy and contains only four main stepsSTEP 1: Open command prompt (CMD) as administratorSo CMD can access the entire network of your computer and moreSTEPS 2: Type color aT phase is optional, you can skip this step, but if you are interested, you can look at the words and everything green at the command promptSTEP 3: Type: netsh wlan show profilesType in the code above at the command prompt to display available network profilesSTEP 4: Type: netsh wlan show profiles (the name of the Wifi you selected to hack) in key=contentType netsh wlan exhibition profiles, whose name you want to hack, then add key=content and click EnterAter that in the security settings of the generated data security key you will see the key content, which is the WiFi PasswordCopy key content code and paste it into the password part of your WiFi profile, which is published in . This tutorial will show you step by step how to find and retrieve wi-fi password from Windows 7, 8 and 10.
